  Vendor management, disaster recovery, business continuity, and vulnerability management.

- **GOVERNANCE**
  Strategy, business alignment and change management.

- **LEGAL AND REGULATORY**
  Compliance, privacy, audit, and investigations

INFORMATION SECURITY SOLUTIONS THAT WORK FOR YOUR BUSINESS

Chief information security officers (CISOs) are highly sought after, to the point where good ones are expensive and hard to come by. So this is a challenge when more and more organizations, reeling in the wake of CISO-less breaches recognize the value in having one in place. A vCISO is an outsourced security practitioner or provider who offers their time and insight to an organization on an ongoing basis, usually part-time and remotely.

There's no set universal standard for hiring a virtual CISO. You can set up a retainer for a certain number of hours, you can hire a CISO on a project basis, and/or you can even buy a chunk of support hours and use them when you need them. It's a way of getting the best of security talent without hiring one full time. A qualified virtual CISO is going to be fully up to speed on the latest best practices, they have experience dealing with a wide variety of scenarios, and they are well-positioned to train your internal security staff.
